Case Study - TS Metals

Cost-Effective Solutions

TS Metals are specialist metal fabricators, welders and engineers to the Oil, Gas & Petrochemical, Power generation, Quarrying & Mining, Defence and Nuclear industries.

They manufacture bespoke constructions in many materials including, mild and stainless steel, aluminum, Zintec, copper and brass at their 20,000 sq ft workshop in Rugby.

MIG, TIG, Spot and Arc welding are one of many specialist services provided by a experienced team of coded welders at TS Metals. However, welding fumes created by the welding process can quickly fill the workshop with a dangerous cocktail of harmful fumes and gases etc.

Fumex Ltd, who have 40 years experience in the extraction industry, were awarded the contract to supply, install and commission four individual weld fume extraction systems.

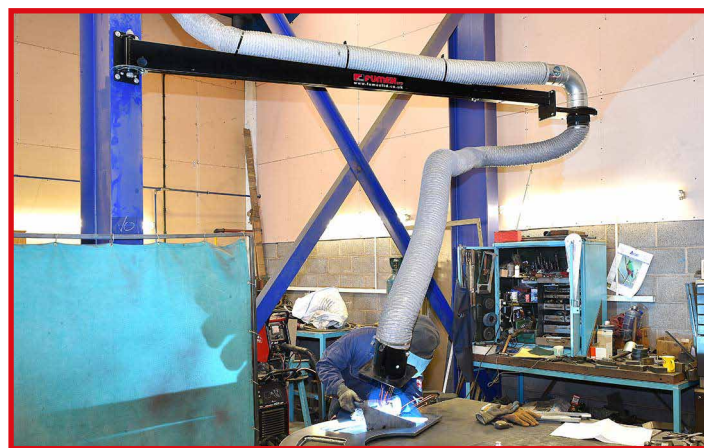

LEV 01 - 4 kW Fan - 6 x 4m Flexi Weld Arms

LEV 02 - 3 kW Fan - 2 x 4m Flexi Weld Arms
2 x 5m Flexi Weld Arms
1 x 9m Flexi Crane Arm

LEV 03 - 4 kW Fan - 4 x 7m Flexi Crane Arms
1 x 5m Flexi Weld Arm

LEV 04 - 1.2 kW Fan - 1 x 5m Flexi Weld Arm

These systems are all designed to provide at source extraction for maximum efficiency, allowing all their welders to work without the risk of breathing in toxic weld fumes and gases.

Both the Flexi weld arms and Flexi crane arms are easy to use and ideal for general engineering/fabrication. Our largest crane arm may be used in any position up to a 9m radius and be supplied in many different size combinations to meet our customers exact requirements.

"The Engineers who fitted the system were very helpful and professional in all they did."
